Shuntaro Suzuki

✉ Email 🎓 Google Scholar 🌐 Shuntaro1227.github.io

Ph.D. applicant in computational neuroscience, working on representation learning and foundation models for neural signals, with a focus on decoding the human cognitive processes and advancing brain-computer interfaces.

Education

Keio University **Apr. 2025 – Expected Mar. 2027**
Master of Information and Computer Science *Kanagawa, Japan*

Keio University **Apr. 2021 – Mar. 2025**
Bachelor of Information and Computer Science *Kanagawa, Japan*

Publications

Journal Articles

Honors and Awards

Funai Overseas Scholarship **Sep. 2027 – Aug. 2029**

- Up to **USD $100,000** over two years: $36,000/year living stipend, up to $14,000/year tuition support, and full health insurance.
- Awarded only for top 16 Japanese students applying for Ph.D. study abroad.

The 2025 PNPL Competition, NeurIPS, 2025 **Aug. 2025 – Sep. 2025**

- **Achieved 2nd place** in the Phoneme Classification Task, Standard Track (USD $1,000 award).
- Developed a deep learning model for phoneme decoding from SQUID-MEG signals recorded during naturalistic audiobook listening.

Research Experience

Semantic Machine Intelligence Lab, Keio University, Japan **Oct. 2023 – Present**
Advisor: Prof. Komei Sugiura

- Developed interpretable deep learning models for motor imagery decoding from ECoG/EEG signals to support communication for patients with ALS, in collaboration with a medical school.
- Developed a cortical-geometry-aware electrophysiological source imaging model trained solely on simulated data, achieving zero-shot transfer to intracranial stimulation localization and epileptogenic zone estimation.
- Resulting work includes first-author papers accepted in J. Neural Eng. [1] and under review [8], [9].

Suntory Global Innovation Center Limited, Japan **Jan. 2025 – Present**
Advisor: Dr. Haruo Mizutani, Prof. Akane Sano, Dr. Masaki Nakanishi

- Developed machine learning pipelines for circadian rhythm analysis using multimodal physiological signals (ECG, PPG, and EEG) acquired from an in-house wearable device.
- Developed an automated artifact detection and removal model for ECG signals using expert annotations.

Neurogica Inc., Japan **Jun. 2025 – Present**

- Developed models for reconstructing diverse physiological indicators (e.g., ECG, ABP, Respiratory Rate) from PPG signals, alongside general-purpose architectures for time-series modeling.
- This work resulted in one first-author and one second-author paper accepted to IEEE ICASSP 2026 [4], [5].

Biomedical Acoustic Signal Processing Lab, Academia Sinica, Taiwan **Aug. 2025 – Sep. 2025**
Advisor: Dr. Yu Tsao

- Developed a deep learning model for speech intelligibility decoding from fMRI signals recorded during speech listening under diverse acoustic conditions, leveraging an extended SSM for efficient fMRI modeling.
- Resulting work accepted at IEEE ICASSP 2026 as co-first author [6].

NTT DATA Institute of Management Consulting Inc., Japan **May 2022 – Oct. 2024**
Advisor: Dr. Takuya Ibaraki

- Conducted neurofeedback intervention studies using a proprietary wearable EEG device, contributing to experimental design and execution, analysis pipeline development, and manuscript preparation.
- Resulting work published in the peer-reviewed journal Front. Neuroergo. [2].

Skills

Programming: Python, MATLAB, C/C++, Bash

Machine Learning: Pytorch, Scikit-learn, pandas, Polars, NumPy

Neuroimaging: MNE-Python, Nilearn, NiBabel, EEGLAB

Tools: Git, GitHub/GitLab, Docker, SLURM/HPC

Languages: Japanese (Native), English (TOEFL iBT: 5.0/6.0, MyBest Score: 5.5/6.0)
